

## Improving quality and production times of your composite parts with the help of a continuous raw material supply system for your machines

- |   |                             |
|---|-----------------------------|
| 1 – 200L Supplier drum                  | 5 – Material filling sensor |
| 2 – Drum support                        | 6 – Pneumatic mixer         |
| 3 – Bearings for manual material mixing | 7 – Heating belt            |
| 4 – Drum platform                       | 8 – Machine                 |

Manual material supply of buffer drum by means of the 200L supplier drum

## Benefits

This system immediately prevents from:

- |                                       |   |
|---------------------------------------|---|
| - Machine cavitation risks            | - Loss of machine settings  |
| - Pump stroke over speed              | - Accidents during handling   |
| - Air inclusion                       | - Equipment area fouling  |
| - Under or over part catalysis        | - Evaporation of solvents   |
| - Gel time variations                 | - Material temperature and viscosity variations                                 |
| - Accelerated ware-out of spare parts | - Sedimentation of pigments, accelerator, inhibitor, and fillers in the mixture |
| - Production stops                    |   |
